

Serial No. 10/715,419
Amdt. dated August 18, 2005
Reply to Office Action of May 18, 2005

Docket No. IK-0070

Amendments to the Abstract:

Please replace the Abstract with the following Substitute Abstract:

A tray for a refrigerator is provided which makes use of storage space on an inner side of the door of the refrigerator without detracting from the storage space provided in the main chambers of the refrigerator. A press plate is rotatably coupled to an inner surface of the door, and rotates into a tray recess formed in the door. By rotating the press plate away from the door, a storage item may be placed in the space formed between the door and the press plate. An elastic force urges the press plate to rotate toward the door, thus positively retaining the storage item between the door and the press plate while occupying a minimal amount of space.
